

High Rejection

Anti-Fouling Reverse Osmosis (RO) Element

LG BW 400 AFR

Overview

LG Chem's anti-fouling brackish water RO membranes feature proprietary chemistry that inhibits the adsorption of biological and organic materials. Unlike competitor RO membranes, LG Chem's unique anti-fouling formulation maintains membrane stability and performance under industry standard cleaning methods, without compromising the highly hydrophilic nature of the membrane's surface.

- Matches industry-standard flux and rejection
- Easy to retrofit existing systems
- Excellent fouling resistance
- Well suited for low quality feed water across varying operating conditions
